

National Women in Engineering Day 2018

“My name is Molly Craggs, I am currently a first-year apprenticeship as a Maintenance Technician at Nissan, studying level 2 in Advanced Manufacturing and Engineering at NA College. This is the first of a 5-year apprenticeship scheme, with the end goal of becoming a fully qualified maintenance technician gaining qualifications like a HNC and NVQ.

My future goals within industry are to achieve a broad range of training/ qualifications as well as hands on experience to become a trained and competent member of the maintenance team within Nissan Sunderland plant. Within engineering Maintenance was always a career path that excited me as I was constantly intrigued to how a process works. The apprenticeship route was appealing as I would gain hands on experience as well as being paid to learn.

For anyone considering starting out in engineering, I would strongly advise to follow your dreams to become part of an evolving industry; working on the forefront with the most advanced machinery as well as providing a greater collaboration of minds.”
